- 4.2) Il metodo di Jacobi converge.
- 4.3) Il metodo di Gauss-Seidel converge.
- 4.4) Per i valori di α trovati al punto 4.1), determinare una condizione necessaria e sufficiente su $\omega \in \mathbb{R}$ per la convergenza del metodo iterativo

$$\mathbf{x}^{(k+1)} = \omega \mathbf{x}_J^{(k+1)} + (1 - \omega) \mathbf{x}^{(k)}, \quad \mathbf{x}^{(0)} \in \mathbb{R}^{3,1},$$
